

Ideas

Filter

- Treemap & Proportional Area
→ visualize using area
- Grouped bar & stacked bar
→ categorize in group
- Lollipop & bar chart
- pie chart & donut chart
- line chart & area chart

Categorise

- show 1 categorical & 1 numerical → unit/bar
- show categorical in map → choropleth map
- show quantitative in map → proportional symbol + choropleth
- show frequency → histogram + density plot
- show 2 categorical & 1 numerical → heatmap/bubble plot/grouped bar
- show composition → pie/donut/stacked bar/proportional area chart

Combine & Refine

- unit chart + treemap → show seat distribution and party in a coalition
- line + bar chart → trends & average
- bubble plot → size + color encoding y-axis with categorical
- area chart → facet, become different line chart multiple small chart

Summarise & Question

1. What story to tell? what section?
 2. what content is suitable to use map?
 3. Data density → bubble plot, area, line chart, pie?
 4. How many party should be represented?
- To show results of GE15 → map
→ To understand voter patterns → turnout?
→ To understand candidate → composition

Sheet 1

Name: Lee Xin Ai

Date: 8 Oct 2025

Title: Malaysia's 15th General Election (GE15) in 2022.

Big Picture / Layout

style → partitioned poster

Sheet 2

Name: Lee Xin Ai

Date: 10 Oct 2025

Title: Malaysia's 15th General Election (GE15) in 2022.

Operations

1. click legend to filter winning party across all map → global filter. include state map
2. hover to get detail.

Focus

1. choropleth map - nation level
 - use categorical color scheme
 - annotate state name winning party.
2. choropleth map - state level.
 - + bar chart - constituency level.

contain 16 states in Malaysia.

3. population pyramid - age & gender for both voter & candidate.

4. pie chart → race for both voter & candidate.

Pros & Cons

Pros:

1. global filter winning party to dive move deeper into the distribution.
2. nation map (big) + state (small) help reader understand Malaysia's geography.

Cons:

1. many small state map → 16 states
2. Implementation of global filter to do research.
3. No data sources for population pyramid. (Age x gender as key).

Big Picture / Layout

Title

result - unit chart / parliament chart

result - choropleth map (Malaysia).

voter turnout section

bubble plot - color by area classification

line chart - trends from GE11-GE15 - turnout

Focus

1. choropleth map - color by winning party.
&
unit chart - detail map to constituency.
2. bubble plot - color by area class.
size by population.
3. line chart - grey line for all state
after select state, highlight
state line.
4. bar/pie chart for voter & candidate.
- use highlight color for max/min.

Sheet 3

Name: Lee Xin Ai

Date = 11 Oct 2025

Title: Malaysia's
15th General
Election (GE15)
in 2022.

Operations

1. zoom scale for map
→ explore the constituency
2. dropdown menu for map
filter state to focus.
3. click legend (color)
for filtering area class
in bubble plot.
→ explore each area class
voter turnout patterns.
4. line chart, drop down
menu to filter state
to focus state voter
turnout trends from
GE11 (2008) to GE15.

Pros & Cons

Pros:

1. Interactivity of the map
help reader understand
Malaysia geography &
GE15 result.
2. Voter turnout focus on
state-level, more clean
chart, 16 states instead
of 222 constituency.

Cons:

1. parliament chart is
not supported by Vega-lite.
2. Unable zoom & pan a
map in Vega-lite.
When zoom scale the map
get zoom into the gap
between west & east Malaysia.
(ocean part).
3. Rely on interactivity to
get clear data view.

Focus

1. lollipop chart focus on compare each winning party seats in parliament.
Add majority reference line.
2. malaysia choropleth map focus on result of GE 15 across whole nation.
Add annotations → state name.
3. state map → choropleth map → zoom in from the map above (malaysia map).
focus on more detail level. To choose state.
4. histogram focus on frequency of voter turnout %

5. heatmap - voter turnout rate trends.

Sheet 4

Name: Lee Xin Ai

Date: 11 Oct 2025

Title: Malaysia's 15th General Election (GE 15) in 2022.

Operations

1. malaysia choropleth map - click legend to filter winning party.
2. state map - default view is KL. Use drop down menu to filter state.
3. heatmap - dropdown menu filter peninsular or east malaysia.

Pros & Cons

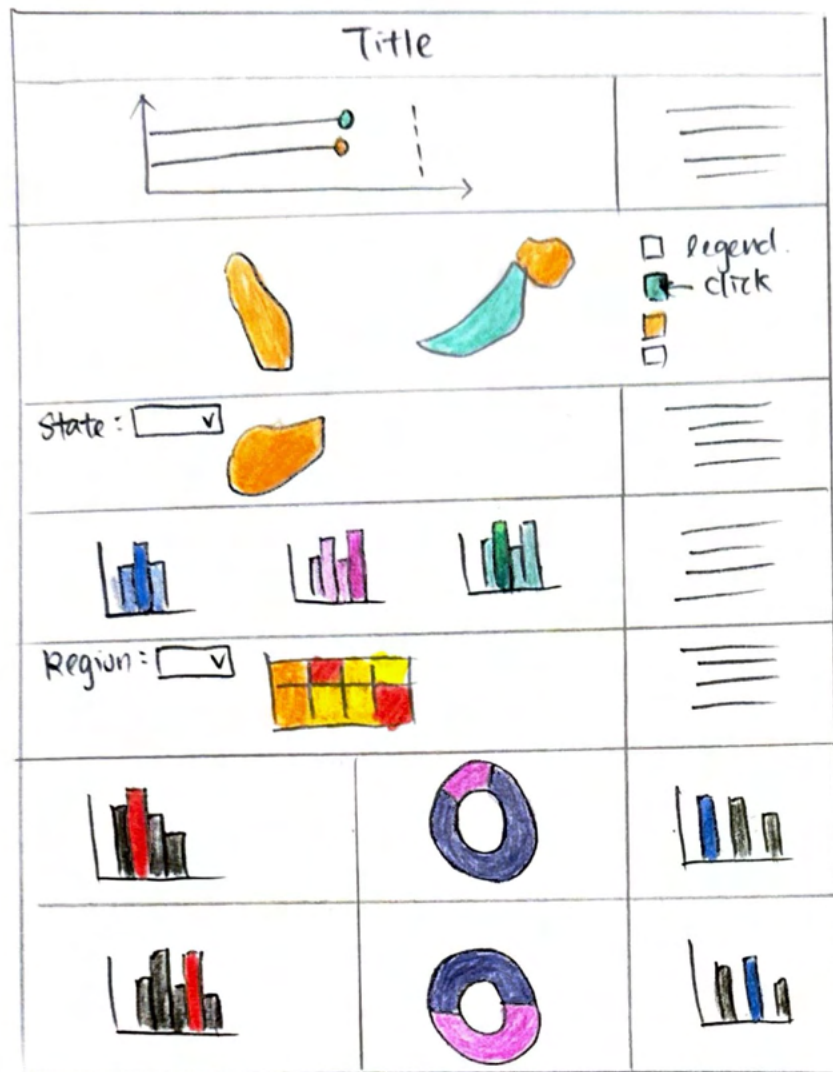

Pros:

1. zoom into state but keep nation view, reader can reference state name from nation map.
2. histogram for each area class show trends & patterns clearly.
3. heatmap can read clear by color schema.

Cons:

1. Too many party as categorical.
2. Voter/candidate demographics
age & race too many categorical values for donut chart.

Big Picture / Layout

Focus

- Results of GE 15 :
 - lollipop (sorted)
 - choropleth map (nation) with state name annotation.
 - choropleth map (state)
- Voter Turnout Patterns :
 - histogram (facet)
 - 3 area classification - rural, semi-urban, urban
 - frequency → count of constituency in the range.
 - heatmap - trends from GE11 - GE15.
- Voter Demographics :
 - bar (for age & race).
- Candidate Demographics :
 - donut chart (for gender) only male/female.

Sheet 5

Name: Lee Xin Ai

Date: 12 Oct 2025

Title: Malaysia's 15th General Election (GE15) in 2022.

Description: Results, voterturnout, demographic profile of voter & candidate.

Operations

- Nation choropleth map - click legend to filter winning party across whole malaysia.
- State choropleth map - dropdown menu choose state, default is Kuala Lumpur.
- Heatmap - dropdown menu to filter region. Ex. east msia, Federal Territory, west msia.
- hover to show detail.

Details

- Voter Turnout Rate

$$= \frac{\text{vote cast}}{\text{Total registered voters}}$$
- Race > Indigenous includes Malay, bumiputera from Sabah/sarawak & orang asli.
- Winning Party name. use short form but show full name in tooltip.
- heatmap - GE11 to GE15
State-level data is using aggregate constituency vote cast & total registered voters then calculate rate %.
- Coalition now include many parties inside, use only the main & from wikipedia information.
